The objective of this project was to design a refreshable Sales MIS and performance reporting system that converts transaction-level sales data into standardized management information. The solution brings together data preparation, KPI calculations, structured MIS reporting, performance analysis, and an interactive dashboard within one Excel reporting workflow.

Solution delivered: A Power Query-driven transformation workflow with formula-based calculations, standardized MIS reports, PivotTable/PivotChart analysis, and slicer-based dashboard interaction.

Category	Tool / Feature	Purpose
Data Import & Transformation	Power Query	Import CSV, correct types, merge master data and create calculated fields
Data Structure	Excel Tables	Maintain transaction and master data
Calculations	Excel Functions	Calculate KPIs, conditional totals and lookups
Analysis	PivotTables & PivotCharts	Summarize and visualize performance
Dashboard	Slicers, Charts & KPI Cards	Interactive management reporting
Validation	Formula & reconciliation checks	Verify reporting consistency

The primary transaction source is a 2026 CSV containing 5,000 sales transactions. The source contains Order ID, Order Date, Customer ID, Salesperson, Product ID, Quantity, Discount %, and Order Status.

- Customer Master — Customer ID, Customer Name, State
- Product Master — Product ID, Product, Category, Unit Price, Unit Cost
- Salesperson Master — Salesperson ID, Salesperson
- Geography Master — State and company-defined Region mapping
- Status Master — Completed, Returned, Cancelled

Figure 1 — Source Transaction Data Structure

3

4. Power Query — Data Transformation

- Imported the 2026 sales CSV using Get Data → From Text/CSV.
- Corrected the DD-MM-YYYY date interpretation and converted Order Date to Date.
- Loaded the five Excel master tables as Power Query connections.
- Merged Customer Master using Customer ID and expanded Customer Name and State.
- Merged Geography Master using State and expanded Region.
- Merged Product Master using Product ID and expanded Product, Category, Unit Price and Unit Cost.
- Merged Salesperson Master using Salesperson and expanded Salesperson ID.
- Created Discount Amount, Sales Amount, Cost Amount and Profit calculated columns.
- Loaded the final 5,000-row transformed dataset into Clean_Data.

Figure 2 A — Power Query Data Transformation

Figure 2 B — Power Query Data Transformation

Result: the source transactions are transformed into a standardized 20-column Clean_Data dataset that feeds the downstream reporting layers.

5. Excel Functions & Calculations Used

Function / Technique	Actual Use	Purpose
XLOOKUP	Product / salesperson descriptive mapping	Retrieve related master information
COUNTIF	Overall and product/status counts	Count matching records
COUNTIFS	Monthly, regional, product and salesperson analysis	Multiple-condition counts
SUMIFS	Sales, cost, quantity and profit	Conditional aggregation
INDEX + MATCH	Performance identification	Return item corresponding to maximum
IFERROR	Margins, rates and lookups	Handle calculation/lookup errors
EDATE	Monthly date windows	Define month boundaries
MAX	Performance analysis	Find highest metric
LARGE + ROWS	Top 5 product helper	Generate ranked values
GETPIVOTDATA	Interactive KPI cards	Read PivotTable values

Figure 5 — MIS Reporting Layer

The Performance sheet converts these results into management-oriented analysis, including highest-sales, highest-profit, highest-quantity and highest-margin observations across regions, products and salespeople, along with monthly sales-growth analysis.

7. Interactive Dashboard Design

The final dashboard is a single management presentation layer with eight KPI cards, six interactive PivotCharts and four slicers.

KPI Group	KPIs	Behavior
Fixed overall KPIs	Total Sales, Total Profit, Profit Margin, Average Order Value	Remain constant when slicers change
Interactive KPIs	Total Orders, Completed Orders, Returned Orders, Cancelled Orders	Respond to slicer selections

Visual components: Monthly Sales & Profit Trend; Regional Sales & Profit Performance; Top 5 Products by Sales; Salesperson Performance; Order Status Analysis; Category-Wise Sales.

Slicers: Region • Category • Salesperson • Order Status

Figure 6 — Final Interactive Sales MIS Dashboard

8. PivotTable & Slicer Layer

The Pivot_Dashboard sheet is the analytical engine behind the interactive visual layer.

PivotTable						Purpose					
Dashboard Slicer Analysis						Supports dashboard filtering architecture					
Regional Sales & Profit						Regional sales and profit comparison					
Top 5 Products by Sales						Top product visualization					
Salesperson Performance						Salesperson sales and profit comparison					
Monthly Sales & Profit						Monthly trend visualization					
Order Status Analysis						Completed, Returned and Cancelled distribution					
Category-Wise Sales						Category sales comparison

Figure 7 — PivotTable Layer

The four slicers are connected to the PivotTable layer and allow interactive filtering by Region, Category, Salesperson and Order Status while preserving the fixed overall KPI design.

9. Key Business Insights

Area	Observation	Value
Overall	Completed sales	₹13,796,429
Overall	Completed profit	₹5,850,929
Overall	Completed-order profit margin	42.41%
Region	Highest sales and profit region	South
Product	Highest sales and profit product	Grooming Kit
Product	Highest quantity product	Notebook Set
Salesperson	Highest sales and profit salesperson	Vikram Singh
Salesperson	Highest profit-margin salesperson	Rahul Verma

These observations are descriptive results from the project dataset and support management review of sales distribution, profitability and operational performance.

10. Validation & Quality Checks

- 4,492 Completed + 144 Returned + 364 Cancelled = 5,000 Total Orders.
- Total Sales – Total Cost = Total Profit for completed orders.
- Transaction-level Discount Amount, Sales Amount, Cost Amount and Profit were checked against the business rules.
- Monthly, regional, product and salesperson totals reconcile to the overall model.
- Dashboard fixed KPIs were checked for independence from slicer selections.
- Interactive KPI and slicer behavior was manually checked in Excel.

11. Automation & Refresh Workflow

CSV Source → Power Query → Master Data Mapping → Clean_Data → Calculations → MIS Reports / Performance → PivotTables → Dashboard

When source transactions or relevant master records are updated, the Power Query layer can be refreshed and the downstream calculation and PivotTable layers refreshed to reflect updated data.

12. Skills Demonstrated

- Sales MIS and management reporting design
- Data cleaning and transformation using Power Query
- Excel formula development and conditional aggregation
- Master-data mapping and structured data handling
- PivotTable and PivotChart analysis
- Interactive dashboard and slicer design
- KPI definition and business-rule implementation
- Data validation and reconciliation
- Business performance analysis and reporting

13. Conclusion

This project demonstrates an end-to-end Business Analytics and MIS reporting workflow using Microsoft Excel and Power Query. It transforms raw transaction data into a standardized analytical dataset, applies defined business rules for KPI calculation, produces structured management reports, and delivers interactive performance analysis through PivotTables, PivotCharts and slicers. The result is a practical, refreshable reporting solution that can be adapted to other business reporting scenarios.

14. Declaration

I hereby declare that the project titled “**Automated Sales MIS & Performance Reporting System**” is my own work, developed as a personal portfolio project to demonstrate practical skills in **Advanced Excel, Power Query, MIS Reporting, Data Analysis, PivotTables, and Dashboard Development**.

The project was created for learning, practical application, and professional portfolio purposes.
